

SMTP - STARTTLS Support

STARTTLS is a way to take an existing insecure connection and upgrade it to a secure connection using SSL/TLS. Note that despite having TLS in the name, STARTTLS doesn't mean you have to use TLS, you can use SSL.

The SBC notification system is based on email sending. With the STARTTLS support the communication will be encrypted between the SBC and the SMTP server.

To activate the STARTTLS support just:

1. Go to **System / Monitoring / Notification**
2. Press **Edit** in the **Notifier** form
3. Set **Use starttls** to **Enable**.

The screenshot shows the 'Notifier' configuration page for an email notifier. At the top, there is a red warning banner that says 'The IP Firewall service is stopped.' with a 'Start' button. Below the banner, the 'Notifier' section is expanded to show the 'Email' configuration. The 'Email Notification' dropdown is set to 'Enable'. The 'SMTP Server Address' is '213.186.33.20'. The 'SMTP Server Port' is '25'. The 'Use starttls' dropdown is circled in red and set to 'Enable'. The 'SMTP User' is 'santago@ramiyoeresc.com' and the 'SMTP Password' is masked with asterisks. The 'Show Warning Message When Email Notification is disabled' dropdown is set to 'Enable'. At the bottom right, there are 'Save' and 'Cancel' buttons.
