

XactView V3-Changing Statuses

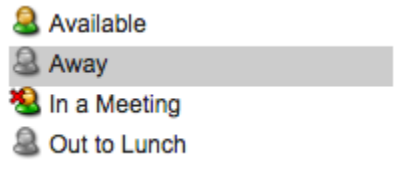

XactView has the ability to allow a user to change their status and for any user to see the current status of other users.

- Click on your username in the upper right hand corner of the page.

- From here you can choose any status that your PBX admin has created on your system. New statuses can be created in the [Presence State](#) module of the PBX Admin GUI.

- Anytime a status is changed here it updates the master status record of the PBX. Statuses can be changed from XactView as shown above or through [Phone Apps](#) or the [User Control Panel \(UCP\)](#).
