

SMTP - STARTTLS Support

STARTTLS is a way to take an existing insecure connection and upgrade it to a secure connection using SSL/TLS. Note that despite having TLS in the name, STARTTLS doesn't mean you have to use TLS, you can use SSL.

The SBC notification system is based on email sending. With the STARTTLS support the communication will be encrypted between the SBC and the SMTP server.

To activate the STARTTLS support just:

1. Go to **System / Monitoring / Notification**
2. Press **Edit** in the **Notifier** form
3. Set **Use starttls** to **Enable**.

The screenshot shows the 'Notifier' configuration page for 'Email' notifications. At the top, there is a red warning banner that reads 'The IP Firewall service is stopped.' with a 'Start' button. Below this, the 'Notifier' section is titled 'Email'. The configuration fields are as follows:

- Email Notification: Enable (dropdown)
- SMTP Server Address: 213.186.33.20 (text input)
- SMTP Server Port: 25 (text input)
- Use starttls: Enable (dropdown, circled in red)
- SMTP User: santiago@ramiayeresc.com (text input)
- SMTP Password: (password field)
- Show Warning Message When Email Notification is disabled: Enable (dropdown)

At the bottom right of the form, there are 'Save' and 'Cancel' buttons.
