

CG Media Boards

Dialogic CG Media Boards and Software Products provide highly available, high-density platforms for developers of large-scale unified messaging, call center, network announcement, IVR, color ring-back tone, and VoIP solutions.

CG Series Media Boards feature up to 16 software-selectable T1/E1 ports, as well as dual Ethernet interfaces that can be used either as two independent IP subnets or in an automatic fail-over mode that switches traffic to an alternate interface without interruption of in-progress calls.
