

Commercial Modules

FreePBX Commercial Pro Modules are additional commercial modules that can be added to enhance and add functionality to a base install of FreePBX Distro. Commercial Modules can be purchased in the [FreePBX Distro Market Place](#) and are only supported on the FreePBX Distro platform. We also recommend only using Asterisk 11 or 13 with commercial modules. For official stance on using PJSIP please visit [this wiki page](#). FreePBX in the default Extension mode is the only supported mode and if you have your system setup with Device and User mode a lot of commercial modules will not work and we can not provide support or assistance on it.
